Minister: Hon. Morris Green
Deputy Minister: B. Walker

INTRODUCTION

The principal purpose of the Timber Utilizaiton Survey is to provide reliable information on primary industrial fibre consumption as a basis for forest resource management planning. It also provides information on individual mill consumption as well as fibre imports and exports.

The data presented in the report summarizes information collected by the Department's Regional staff for the fiscal year April 1, 1989 to March 31, 1990. All pulp and paper mills, fibreboard and plywood plants were sampled. However, only those sawmills consuming more than 500 m^3 of roundwood were included in the survey. As a result, total roundwood consumption may be slightly higher than the survey indicated.

The figures appearing in Part I summarize the industrial roundwood harvest and consumption from various sources by industry type. Part II lists individual mill consumption by source and species. Part III lists those pulp and paper and fibreboard mills consuming chips and other residue as well as individual sawmills producing such chip and residue. Part IV lists all mills importing and exporting roundwood chips and other residue by industry type.

All figures presented in the following tables are in cubic metres. The appropriate conversion factors may be found in Appendix I at the back of the report.
